## The Citizen Panel

The Citizen Panel (Swedish: Medborgarpanelen – MP) is an online panel survey run by the Laboratory of Opinion Research (LORE), which is a part of the SOM-institute at the University of Gothenburg. Today, LORE is a research infrastructure for collecting data from online questionnaires, mainly for survey experiments and panel studies. An essential part of LORE is also to contribute to methodological development and testing in the area of web surveys. Each survey consists of a number of specific studies as well as a number of more general questions that are not included in a specific study. The design and content of these specific studies vary, but are mostly either survey experiments using random assignment or panel studies that span over several waves of the Citizen Panel.

## Citizen Panel 38 (MP38)

- The panel was carried out between Tuesday June 9, 2020 and Wednesday July 1, 2020.
- Questionnaires were sent to 57,103 panelists of which 34,401 made a complete response (AAPOR RR5: 60%, Gross Participation Rate: 61%, Net Participation Rate: 65%).
- All in all, there were 9 studies included in Citizen Panel 38. In addition to participating in at least one of these studies, the median respondent was asked to answer 5 general questions.
- Respondents in the panel are recruited with both probability and non-probability based methods.

# Glossary

| | |
|---|---|
| *AAPOR participation rate (RR5):* | AAPOR Standard Definitions 2011 participation rate measure excluding partial responses (partials are defined as response with over 20 and less than 50 percent item nonresponse; calculation: RR5=(responses-partials)/GSS). |
| *Background variables* | Includes questions related to demographic or basic socio-economic factors such as age, education, household etc. These are regularly updated. |
| *Break-offs* | Type of nonresponse. Defined as responses with more than 50 percent item nonresponse, used when calculating AAPOR RR5. |
| *Coverage rate/Absorption rate* | The quotient of net and gross sample size (coverage=NSS/GSS). Coverage and absorption rate are synonyms describing this relation. |
| *Date of reminders* | Reminders are sent by email to those in the sample who have not yet completed the survey. |
| *E-mail bounce backs* | Due to automatic spam filters and similar services, or incorrect e-mail addresses, certain e-mails may result in a bounce back, i.e. a non-contact. Includes booth "hard" and "soft" bounce backs. |
| *Field period* | The field period is the time passed between the first and the last field day. |
| *General variables (Study 0)* | General variables are the variables that are not related to a specific study within the survey. Most of these are repeated on a regular basis, often at least twice every year. Background variables are included in this definition, treated as a sub-category. |
| *Gross participation rate (GPR)* | The quotient of responses and gross sample size (GPR=responses/GSS). Does not exclude partials. Corresponds to AAPOR RR6 and COMR. |
| *Gross sample size (GSS)* | Gross sample size is the number of potential participants in the initial sample. |
| *Gross subsample size* | Gross subsample size is the number of potential participants assigned to a specific study in the initial sample. |
| *Item non-response* | Calculated by subtracting the item response rate from one (1-item response rate). |
| *Item response rate* | Calculated by dividing the number of item responses with the number of received/applicable items. |
| *Net participation rate (NPR)* | The quotient of responses and net sample size (NPR=responses/NSS). Does not exclude partials. |
| *Net sample size (NSS)* | Net sample size is the number of potential participants in the initial sample, excluding e-mail bounce backs (NSS=GSS-bounce backs). |
| *Net subsample size* | Net subsample size is the number of potential participants assigned to a specific study in the initial sample, excluding e-mail bounce backs within that subsample. |
| *Partial response* | Defined as responses with more than 20 and less than 50 percent item nonresponse (less than 80% of the questions answered), used when calculating AAPOR RR5. |
| *Received/applicable items* | |
| *Responses* | The number of surveys completed by a participant that are registered on the last field day. |
| *Study* | A study is a featured specific study, e.g. an experiment, or a set of panel questions with a specific purpose, or some other kind of specific and delimited study. |
| *Text-pages* | Pages in the survey where no questions are asked, i.e. text-only. |
| *Time-use outliers, speeders* | A respondent is defined as a speeder if it the mean time-use per question/item is less than the first quartile minus half the interquartile range (Q1 – 0.5×IQR). |
| *Time-use outliers, sleepers* | A respondent is defined as a sleeper if it the mean time-use per question/item is more than the third quartile plus 1.5 times the interquartile range (Q3 + 1.5×IQR). |

The Laboratory of Opinion Research (LORE) is an academic web survey center located at the SOM-institute at the University of Gothenburg. The objective of the Laboratory of Opinion Research is to facilitate for scientists to conduct web survey experiments, collect panel data, and to contribute to methodological development.
